Woojin Plastic has ability to develop your own projects with our technical Know-How & very professional machines. If you need any part even in a brainstorm stage, Simply Pass us. We can make whatever you need.

Development Flow

STEP 1

Brainstorm

Send simple explanation, rough hand drawing, 2D Cad Drawing, or 3D Modeling.

STEP 2

Modeling

Whatever you send us, we can finalize the parts to be 3D modeling with our high skilled technicians & designers.

STEP 3

Mock-up

After studying the modeling, we arrange the Mock-up for checking the shape.

STEP 4

Proto Mold

After studying the modeling, we arrange the Mock-up for checking the shape.

STEP 5

Production Mold

After confirm of Mock-up or Proto samples, we finally start to make a tool for you.

Characteristic of Acetal

Acetal is a crystalline thermoplastic polymer material & bridges the gap between metals and ordinary plastics with a unique combination of creep resistance, strength, stiffness, hardness, dimensional stability, toughness, fatigue resistance, solvent and fuel resistance, abrasion resistance, low wear and low friction.

Acetal has excellent flexural memory and property retention when subjected to repeated loading.

Physical properties remain consistent across a wide range of temperature, relative humidity, and weather conditions.

Characteristic of Nylon66

Nylon 66 is a thermoplastic polyamide resin & the most versatile of plastics.

- Easy to process; easy to modify to meet specific needs, environmentally responsible in production and in reuse.

It's tough, light and surprisingly resilient in hot, chemically aggressive and humid environments.

This material maintains good tensile strength, chemical resistance, stiffness and flexural memory.

Nylon is excellent in high temperature applications.

However, a hygroscopic resin, therefore, physical properties will vary as the relative humidity changes.

When dry, tensile strength is higher and impact is lower. When wet, tensile strength is lower and impact strength is higher.

Characteristic of PC (Polycarbonate)

PC is an Engineering Plastic with superior physical characteristics, notably Transparency, High Impact Strength, And High Heat Resistance.

This polymer is highly transparent to visible light and has better light transmission characteristics than many kinds of glass.

PC is stronger, usable in a larger temperature range but also more expensive than other Engineering Plastics.

Characteristic of PP (Polypropylene)

PP is most popular & cheap material used for general injection. Use this material where load bearing and impact are minimal. Another advantage is that the material offers a very soft feel for side release buckles, which is ideal for children.
